

Heatmaps (b)(c) use mean blind scores on D3–D10, n = 84 per track (Track D n = 80); the two judges are never averaged.

Mean (D3–D10): per-question Δ_i = mean over d = 3…10 of (S_A − S_B), then paired mean with 95% CI (t).

D1/D2 are excluded (not commonly comparable between Track A and Track B); D3–D10 are paired per question.

No 80 % power band and no MDD verdict are drawn (PI ruling); MDD definitions live in Methods/caption.
